One hidden layer Neural Network

Activation functions

Activation functions

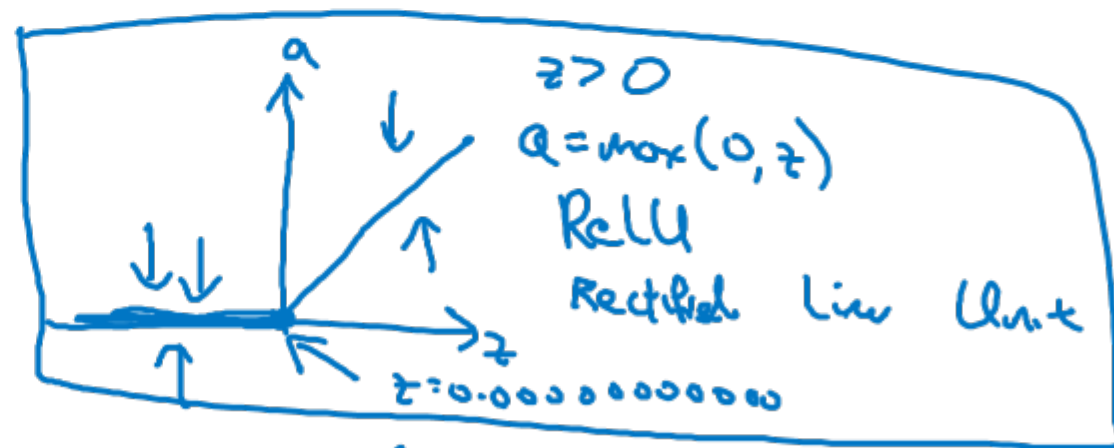

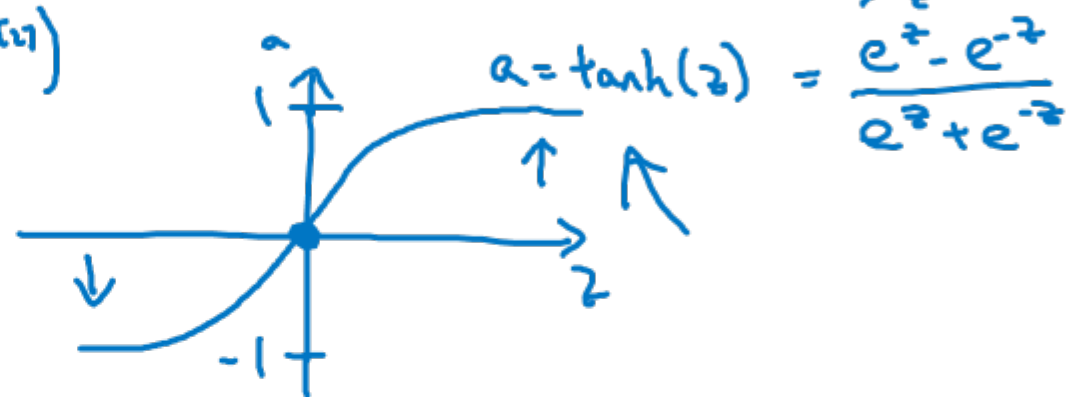

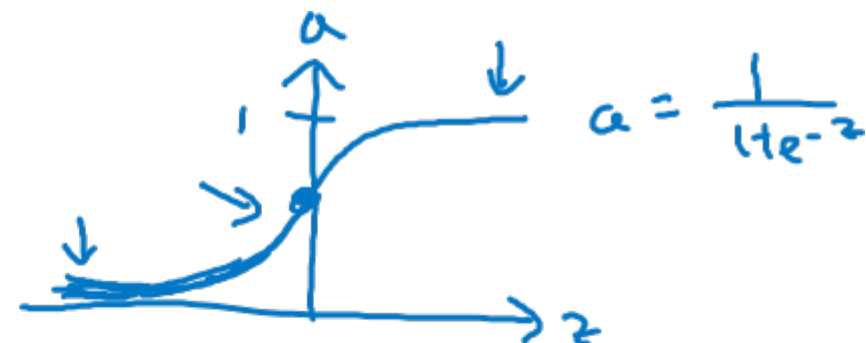

Given x :

$$z^{[1]} = W^{[1]}x + b^{[1]}$$

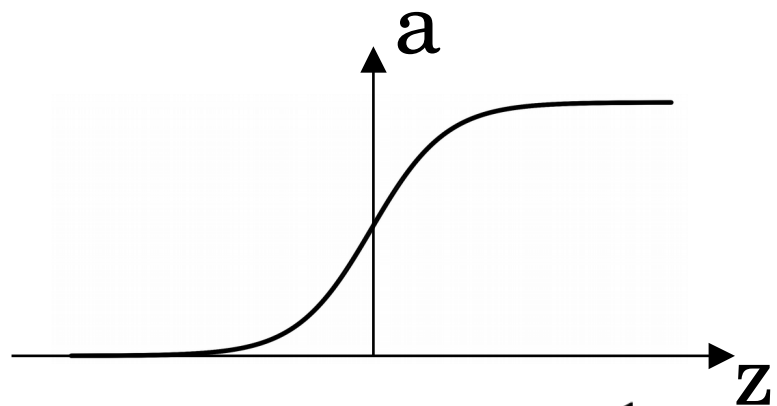

$$\rightarrow \text{[diagonal lines]} g^{(1)}(z^{(1)})$$

$$z^{[2]} = W^{[2]}a^{[1]} + b^{[2]}$$

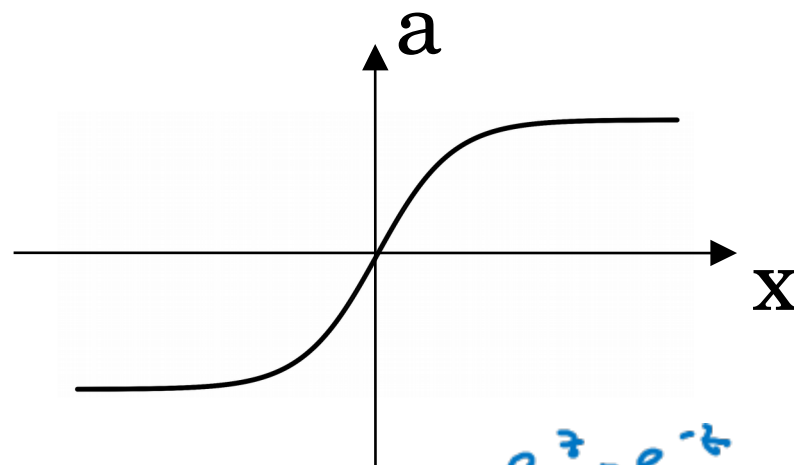

$$\rightarrow \text{[diagonal lines]} g^{(2)}(z^{(2)})$$

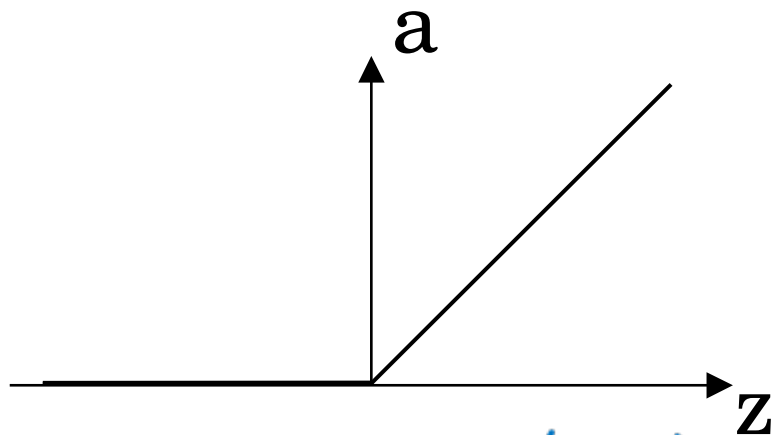

Pros and cons of activation functions

sigmoid: $a = \frac{1}{1 + e^{-z}}$

tanh: $a = \frac{e^z - e^{-z}}{e^z + e^{-z}}$

ReLU $a = \max(0, z)$

Leaky ReLU $a = \max(0.01z, z)$
